

RepuScore

Desc

Find out how the web feels! RepuScore grades the attitude of a website. Try using RepuScore on a movie or product review. Saves you time by telling you how others have felt.

Features

- Automatic injection of RepuScore into each Google search result.
- Scoring of web content via sentiment analysis – provided by <http://www.repustate.com>.

How It Works

RepuScore is a measurement of the sentiment of a web site. The RepuScore of a website is displayed as a coloured gear, either positive (🟢), negative (🔴), or neutral (⚪). The absolute value may be displayed by hovering the mouse over the gear on the Chrome toolbar.

Technology

- Chrome API and Repustate API.
- HTML, CSS, and Javascript.
- jQuery and AJAX

Troubleshooting

- **There are no gears in my search results?**
At this time there has not been extensive testing on the behaviour of RepuScore with other extensions. It is known that The AdBlock extension interferes with displaying gears within search results; disable AdBlock if you wish to use this feature.
- **Why are some of the gears black?**
The RepuScore is calculated in realtime, therefore while the score is being calculated black gears are displayed. Calculation times may vary as this process is dependant on RepuState response time and your internet connection. Enjoy a cup of coffee while you wait.
